

# Project Executable Files & Execution Guide

Date: 1 July 2026

Project Name: AdForge AI: AI-Powered Advertisement Copy Generator

## Step 1: Project Links & Access

| Resource Type             | URL/Access Link                                                                                                                                                                         |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Source Code Repository    | <a href="https://github.com/Rudrashekhawat2004/AdForge_AI.git">https://github.com/Rudrashekhawat2004/AdForge_AI.git</a>                                                                 |
| Live Deployed Application | <a href="https://wrecking-parmesan-underwire.ngrok-free.dev">https://wrecking-parmesan-underwire.ngrok-free.dev</a>                                                                     |
| Demo Video Link           | <a href="https://drive.google.com/file/d/1PDkU_euGRcP2JhCQxpBCvevszvZmE8AB/view?usp=drive_sdk">https://drive.google.com/file/d/1PDkU_euGRcP2JhCQxpBCvevszvZmE8AB/view?usp=drive_sdk</a> |

## Step 2: Key Executable Files & Folder Structure

| S.no | Folder / File Name | Description & Purpose                           |
|------|--------------------|-------------------------------------------------|
| 1    | /app               | Contains the main Flask application and routes. |
| 2    | /templates         | HTML files for web user interface.              |
| 3    | /static            | CSS,JS,and image assets for the UI              |
| 4    | .env               | Environment variables dor APi keys.             |

### Step 3: Local Setup & Execution Instructions

| Step | Action/Terminal Command        | Expected Outcome / Notes                     |
|------|--------------------------------|----------------------------------------------|
| 1    | Git clone [repo_url]           | Download the project code locally.           |
| 2    | Pip install -r requirement.txt | Install necessary Python dependencies.       |
| 3    | Configure.env                  | Set up Groq API keys.                        |
|      | Python main.py                 | Launches the Flask server on the local port. |
